

Data binding tool

Setup guide

1. **Turn 'Data binding' feature on.** Since you don't want users to see data binding commands and tools in the UI on regular basis, you need a way to turn 'development mode' on, perform all the data binding operations, and turn it off. To do so:
 - go to features list: <your Creatio address>/0/Nui/ViewModule.aspx#BaseSchemaModuleV2/Feature sPage;
 - find a feature named 'Data binding' and turn it on;
 - Save changes and refresh a page.

If you will need to turn feature off, you need to do it in the same way.

2. **Perform data binding operations.** You can bind the following types of data:
 - **Lookup** - go to 'Lookups' section, use 'Bind lookup' button;
 - **Lookup content** - go to 'Lookups' section, open Lookup content, use 'Bind data' button;
 - **System settings** - go to 'System settings' section, open system setting page, use 'Bind setting' button.
 - **Operation permissions** - go to 'Operation permissions' section, open operation page, use 'Bind operation' button.
 - **Displayed columns setup** - go to the section you need, View menu, use 'Bind columns setup' action.
