

Additional web server settings:

1. File “**FacebookWebhookService.svc**” has to be placed into folder **<app_root_folder>\Terrasoft.WebApp\ServiceModel** and contains:

```
<%@ ServiceHost Language="C#" Debug="true"  
Service="Terrasoft.Configuration.FacebookWebhookService.FacebookWebhookService" %>
```

2. Service configurations have to be updated by the following service:

```
<service name="Terrasoft.Configuration.FacebookWebhookService.FacebookWebhookService">  
    <endpoint name="FacebookWebhookServiceEndPoint"  
        address=""  
        binding="webHttpBinding"  
        behaviorConfiguration="RestServiceBehavior"  
        bindingNamespace="http://Terrasoft.WebApp.ServiceModel"  
        contract="Terrasoft.Configuration.FacebookWebhookService.FacebookWebhookService" /> </service>
```

This key has to be added to the file “**services.config**” located in both folders:

- **<app_root_folder>\Terrasoft.WebApp\ServiceModel\https**
- **<app_root_folder>\Terrasoft.WebApp\ServiceModel\http**

3. The following location has to be added to the web server’s main configuration file **web.config** located in the folder: **<app_root_folder>\Terrasoft.WebApp**:

```
<location path="ServiceModel/FacebookWebhookService.svc">  
    <system.web>  
        <authorization>  
            <allow users="*" />  
        </authorization>  
    </system.web>  
</location>
```

4. Key **<key="AllowedLocations">** in the web server’s main configuration file’s **web.config** in the folder: **<app_root_folder>\Terrasoft.WebApp** has to be extended by the following path: **ServiceModel/FacebookWebhookService.svc**;

5. Application has to be restarted, server cache has to be purged.
