

Mass updating Pro for Creatio configuration guide

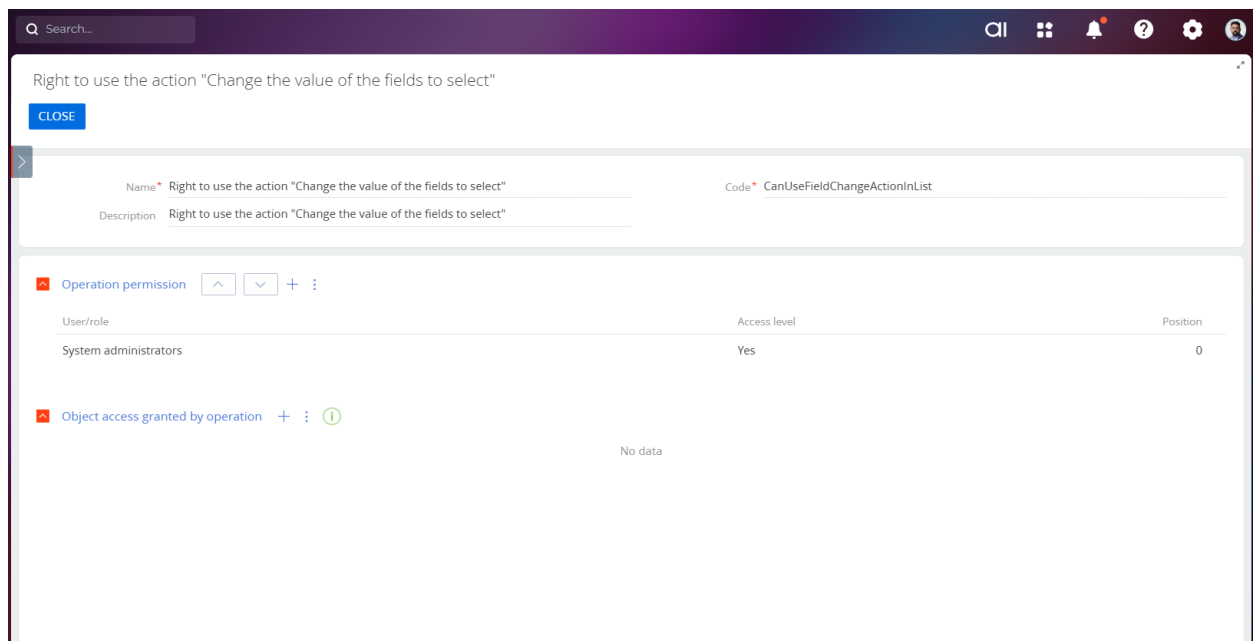

Setting up permissions for the operation "Right to use the action "Change the value of the fields to select""

To allow users to perform mass field updates, you must configure access to the **"Right to use the action "Change the value of the fields to select""** operation. By default, this operation is available only to **System administrators**.

To expand access to other roles or users:

- Open the **"System Designer"**.
- Navigate to the **"Operation permissions"** section.
- Find the operation **"Right to use the action 'Change the value of the fields to select'"**.
- In the **"Operation permission"** block, click **"+"** to add a role or user.
- Select the desired user or role from the list.
- Ensure the **Access level** is set to **Yes**.

This will grant the selected roles or users the ability to perform mass updates on fields within lists.
